OneNote is a digital notebook for capturing, storing, and sharing all kinds of information. The first thing you see when you open OneNote 2013 is a fresh, clean look that lets you focus on your thoughts and ideas instead of the interface. Full integration with the cloud means you can free your files from your computer's hard drive so your notes and information are saved and searchable wherever you go on nearly any mobile device, tablet, or browser. When you store your notebooks in the cloud, you can keep them in sync across your favorite devices with the separately downloadable OneNote apps including your Windows computer, Windows Phone, iPhone, iPad, Android, and Symbian device. You can also use the free Office Web App in virtually any browser. And if you have a Windows 8 tablet or slate PC, the Touch-enabled OneNote app makes it even easier to use OneNote on the move.
