[Cheap Price] **proDAD Mercalli 4 SAL Full Version**

No matter what sport, no matter what type of shooting, no matter what kind of camera you're using - You hope and expect your videos to look like your actual experiences! And what do you get instead? Shaky and distorted images! But that was yesterday, this is today: You take care of the shooting, then Mercalli V4+ optimizes the footage for you! Video stabilizer, rolling shutter and CMOS correction for any action-cam, camera phone, or camcorder. And no matter whether it's the vehicle's engine vibration, or a bumpy surface, that's causing the faulty image: Mercalli handles jello, vibration, and distortion - individually and in combination! Compared to a camera's internal stabilizer, Mercalli V4+ clearly produces the superior result and allows for a wider viewing angle. With its additional features - comprehensive CMOS correction and further optimization in 3-axis-stabilization - with Version 4+, you can expect the most powerful Mercalli yet. Forget worrying about vibration, shakes, or complicated mounting devices. Don't get frustrated with expensive or heavy gyros or gimbals, which are not able to remove CMOS distortions and shorten battery life (if you're shooting from an aerial plane/copter) due to added weight. Don't bother with in-camera stabilization, which only decreases the video resolution, often does a sub-optimal job of stabilizing, and can't correct CMOS distortions. Simply mount the camera wherever you want on whatever you want and focus on getting that fantastic shot - leave the stabilizing and distortion corrections to Mercalli V4 SAL+. Treat yourself to the best stabilization available. Mercalli is an ideal companion product for proDAD's other specialized tools like ReSpeedr for slomo and timelapse sequences and DeFishr for an automatic fisheye correction to further optimize and enhance videos.
